## Коммуникативные и речевые компетенции: развитие через изучение дополнительной литературы<sup>1</sup>

**Димитрова Люба,**

*аспирантка педагогического факультета, кафедра дидактики, Софийский университет им. святого Климента Охридского, г. София, Болгария*

**Аннотация:** Работа по формированию коммуникативной компетенции у учеников требует от учителя начальных классов активной позиции в отношении источников, ежедневно влияющих на процесс формирования речи детей. Актуальность исследования методологического потенциала дополнительной литературы обусловлена ростом пассивности родителей в деле развития речи и коммуникативных навыков детей. Формирование активного и критического отношения учеников к литературе, не включенной в списки обязательной для изучения в рамках школьной программы, обоснование важности их свободы в выборе текстов для чтения как цели образовательного процесса не является в полной мере изученной педагогической проблемой. Работа с дополнительными (внепрограммными) источникам чтения и ее внедрение в качестве методологической технологии в школе не определяется государственными образовательными стандартами и в значительной степени зависит от инициативы и личности учителя. Необходимо разработать систему действий, на которую учителя могли бы опираться в своей повседневной работе по формированию коммуникативной компетенции учащихся.

**Ключевые слова:** начальная школа, коммуникационные и речевые компетенции, свобода выбора текстов, дополнительная литература.

## Communicative and Speech Competences: Its Development using Literature for Children

**Dimitrova Luba,**

*PhD Student, Faculty of Education, Department of Didactics, Sofia University «St. Kliment Ohridski», Sofia, Bulgaria*

**Abstract.** The work on the formation of communicative competence of pupils requires from the primary school teacher an active position in relation to the sources that daily

1. The research is funded by the state budget for Scientific Research for 2018 granted to Sofia University, «Science and Education for Smart Growth 2014 - 2020» Operational Program. The research was conducted under the scientific guidance of Prof. Nely Ivanova.

influence the process of forming the speech of children. The relevance of the study of the methodological potential of additional literature is due to the increase in the passivity of parents in the development of the speech and communication skills of children. Formation of an active and critical attitude of students to additional literature, the importance of their freedom in choosing texts to read as the goal of the educational process is not fully studied in Pedagogical Sciences. Work with additional (extra-curricular) sources of reading and its introduction as a methodological technology at school is not determined by state educational standards and largely depends on the initiative and personality of a teacher. It is necessary to develop a system of actions on which teachers could rely in their daily work to build the communicative competence of students.

**Keywords:** primary school, communication and speech competences, freedom of choice of texts, additional literature.

The article presents the results of a research on communicative and speech competence level of the primary school pupils assessed by their teachers.

The research was carried out within the framework of the research project «Level of formation of the communicative competences of pupils at the initial stage of basic education by the eyes of parents and teachers», headed by Prof. Dr. Habil Nely Ivanova.

One of the leading research aims was to discover the intersection points between the process of reading and the communicative competences development of the primary school children.

Another aim was to reveal the potential of the unassisted reading for the benefit of the development of communicative and linguistic competences. The research also aimed at the analyses of the need of the continuity of the process – education at school and self-training at home. It states that the reading could be used as a source for development of new and more effective teaching methodologies. The necessity of teachers' and parents' joined efforts in stimulation of children to read science-fiction and other literary works was emphasized.

Methodology and methods: [Bijkov, Kraevski 1999; Communication competence... 2005; Ivanova 2014; Gospodinov 2016; Zdravkova 2005].

The research was held in April 2018 and respondents are from 42 towns and villages from different regions of Bulgaria. The tool for collecting information was an unstandardised questionnaire. Teachers answered 14 questions, 1 of them with an open-answer and 13 - with selectable possible answers.

The research group included 204 teachers: responsible for 1<sup>st</sup> grade – 50 respondents, 2<sup>nd</sup> grade – 48 respondents, 3<sup>rd</sup> grade teachers – 51 and 4<sup>th</sup> grade teachers – 49 respondents. Six of the respondents did not fill in the grade of their pupils.

The topical questions motivate respondents to submit information and the numerous elective answers give the opportunity for comprehensive summaries and for in-depth research into separate subtopics.

The constant and close relationship between parents and teacher during this educational stage is another prerequisite for the accuracy and high degree of reliability of the teachers' opinion. School and family are the factors that can best contribute to the development of communicative competences by overcoming the difficulties of reading alone.

Teachers were given the opportunity to assess the achievements of their pupils using a 5-degree scale, 1 means «I totally do not agree» and 5 - «I totally agree». Fourteen statements related to communicative competencies were proposed for their attention.

Since the goal is to investigate the problems in the formation of communication skills, we will focus on the data we got from answers rated 3 and lower. They reveal the weaknesses that cannot be easily overcome and point to the need to optimise work by changing the approach, using new methods, various didactic technologies.

It is noteworthy that the assessment of practitioners almost always excludes the lowest degree - «I totally do not agree», even for the youngest students, by presenting an optimistic picture at the end of the school year. Of all respondents, only 6 teachers (3%) indicated this answer on the scale and only once.

The students' skills to determine the meaning of a word and use it as well as to use facts and ideas from unwritten texts in a written answer to a question are rated the lowest. It should be noted that the negative ratings are placed by second class teachers, which suggests the different status of the first graders, especially given that the literacy period takes much of the time during the first school year.

Figure 1 shows information obtained from the first class teachers' answers. The table presents quantitative data in numbers and percentages.

Statement	1	%	2	%	3	%	4	%	5	%
Listening: Students understand short, clear explanations		0		0		0	7	14	43	86
Listening: Students can extract important information from audio texts		0		0		0	9	18	41	82
Reading: Students understand short texts of familiar topics		0		0	3	6	10	20	37	74
Reading: Students understand the important information in elementary text		0		0	3	6	12	24	35	70
Reading: Students extract specific information from non-fictional text		0		0	6	12	11	22	33	66
Speaking: Students interpret facts and ideas from scientifically popular text		0	25	50	12	24	8	16	5	10
Speaking: Students compose text on a verbal basis		0	10	20	27	54	10	20	3	6
Writing: Students write short sentences for greeting, wishes, thanks, preference		0	2	4	8	16	5	10	35	70
Writing: Students make a detailed re-writing of short text		0	30	60	19	38	1	2		0
Students define the direct and transitive meaning of the word		0	39	78	11	22		0		0
Students use the meaning and meaning of the word		0	42	84	8	16		0		0
Students choose words according to a specific language context and a communicative situation		0	6	12	34	68	10	20		0
Students use facts and ideas from nonhud. the written answer to a question asked		0		0	8	16	14	28	28	56

The pupils write a written text on a story and on a support (a proposed literary hero)		0	19	38	31	62		0		0
--	--	---	----	----	----	----	--	---	--	---

Figure 1. Data of a survey among 1st grade teachers

Low score - 2 by the assessment scale - are given to most of the statements: 8 out of 14. As poorly developed, teachers assess the ability to interpret facts and ideas from popular science text - half the total number of first class teachers; as well as the ability to retell in detail by writing - 60%.

First-graders do not yet have the experience to determine the direct and figurative meaning of the word - 78% and use them adequately - 84%. It is very difficult for young pupils to perform productive tasks - a written text by experience - 38% of teachers think so. Better is the result of doing the same exercise, but verbally - 20%. Students can not choose words according to a linguistic context and a communicative situation, according to 12% of first grade teachers.

With an average success - 3 by the rating scale, the youngest pupils deal with most of the criteria - 12. Among them are: «Students choose words according to a specific language context and communicative situation» - 68%, «Students compose a written text on their own experienced event and with a verbal support» - 62% and the oral performance of the same productive task - 54%.

We can conclude that the first-grade students experience difficulties in fulfilling writing exercises, in recognition and use of direct and figurative meaning, and the adequate selection of words, according to a specific language context. These results are explicable and expected as a consequence of the specific objectives set in the curriculum, tailored to the specifics of psychophysiological development of children at this age.

Figure 2 shows the opinion of the second grade teachers regarding the statements.

Statement	1	%	2	%	3	%	4	%	5	%
Listening: Students understand short, clear explanations		0		0		0	6	13	42	88
Listening: Students can retrieve important information from audio texts		0		0	2	4	6	13	40	83
Reading: Students understand short texts of familiar topics		0		0	1	2	3	6	44	92
Reading: Students understand the important information in elemental text		0		0		0	5	10	43	90
Reading: Students retrieve specific information from non-fictional text		0		0	5	10	23	48	20	42
Speaking: Students interpret facts and ideas from scientifically popular text		0		0	21	44	19	40	8	17
Speaking: Students compose text on a story, on a verbal basis		0		0	6	13	8	17	34	71
Writing: Students write short sentences for greeting, wishes, thanks, preference		0		0	1	2	3	6	44	92

Writing: Students make a detailed re-writing of short text		0	1	2	7	15	40	83		0
Students define the direct and transitive meaning of the word	1	2	3	6	15	31	29	60		0
Students use the meaning and meaning of the word	1	2	7	15	32	67	8	17		0
Students choose words according to a specific language context and a communicative situation		0	2	4	38	79	8	17		0
Students use facts and ideas from nonfiction. the written answer to a question asked	1	2	8	17	29	60	10	21		0
The pupils write a written text on a story and on a support (a proposed literary hero)		0	5	10	12	25	31	65		0

Figure 2. Data of a survey among teachers in the 2-nd grade

Respondents give a low and average grade to the statements mentioned by first grade teachers as well. The enormous percentage of teachers estimate the students' ability to choose words according to the communicative situation as insufficient - 83% (79% + 4%). The percentage of teachers with a pessimistic assessment of pupils' ability to use facts and ideas from non-fiction texts in a written answer to a question is very high - 79% in total.

The best rate is not given to any of the statements related to component «Literature» of the discipline «Bulgarian Language and Literature» - insufficiently developed are students' skills to compose, retell, distinguish and use the meaning of words, use ideas from non-fictional texts, adequate vocabulary selection.

An average grade is obtained by the pupils for their oral presentation in the interpretation of facts and ideas from non-fictional texts, according to half of the teachers interviewed. Obviously, students' difficulties arise not only from the written form of expression, but also from the ability to perceive and interpret information from a variety of sources - periodicals, encyclopedias, collections of different content.

The information proposed in Figure 3 introduces the number of teachers, according to the degree of consent with each statement. The table refers to third class teachers.

Statement	1	%	2	%	3	%	4	%	5	%
Listening: Students understand short, clear explanations		0		0	2	4	5	10	44	86
Listening: Students can retrieve important information from audio texts		0		0	6	12	13	25	32	63
Reading: Students understand short texts of familiar topics		0		0	4	8	2	4	45	88
Reading: Students understand the important information in elemental text		0		0	3	6	3	6	45	88
Reading: Students retrieve specific information from non-fictional text		0		0	38	75	12	24	1	2

Speaking: Students interpret facts and ideas from scientifically popular text		0	7	14	33	65	11	22		0
Speaking: Students compose text on a story, on a verbal basis		0	2	4	10	20	39	76		0
Writing: Students write short sentences for greeting, wishes, thanks, preference		0		0	1	2	8	16	42	82
Writing: Students make a detailed re-writing of short text		0	10	20	37	73	4	8		0
Students define the direct and transitive meaning of the word		0	40	78	7	14	4	8		0
Students use the meaning and meaning of the word		0	42	82	8	16	1	2		0
Students choose words according to a specific language context and a communicative situation		0	36	71	9	18	6	12		0
Students use facts and ideas from nonhud. the written answer to a question asked		0	12	24	33	65	6	12		0
The pupils write a written text on a story and on a support (a proposed literary hero)		0		0	5	10	36	71	10	20

Figure 3. Data of a survey among teachers in the 3-rd grade

The data from the study with third-grade teachers leads us to the same conclusions. Difficulties encountered by older students are likely to be caused by deficits in previous years. However, we must take into account the higher expectations as well as the increasing influence of subjective factors on the teacher's opinion at the end of the third year of the initial stage - their concern about the students' production at the forthcoming exams, their ambition, the already established, close emotional connection with children, etc.

High percentages of rate 2 are seen for the same statements - definition of concrete and figurative meaning of words - 78%, use of concrete and figurative meaning - 82%, word selection - 71%. The sum of rates 3 shows a clear trend and unambiguous negative result. These are the main problems of third grade students.

There is also a tendency for the usage - verbally or in writing, of facts and ideas from non-fiction texts - up to 89% of teachers give an average and lower rate for this skill in writing. Pupils have difficulties also to make a detailed retelling of a text - 93% of the teachers agree to small or medium degree with the statement

The ability of the third-grade students to derive specific information when reading a text is assessed as an average by 75% of the professionals. While interpreting this data we must keep in mind that the primary teacher, unlike his colleagues in the next stage of education, has an overview of the student's performance in different subjects. He/She has also the fruitful opportunity for an interdisciplinary approach by carrying through an indirect training on Bulgarian Language and literature in all classes.

Probably teachers' observations at the students' performance in the subjects «Man and Society» and «Man and Nature» influence the evaluation. This «view from above» on the student's performance add even greater value to the assessment and draws attention to this competence as particularly important.

In the fourth grade the evaluation results are shifted to the right part of the scale. Figure 4 shows information about this fact.

Statement	1	%	2	%	3	%	4	%	5	%
Listening: Students understand short, clear explanations		0	1	0	3	6	8	18	37	76
Listening: Students can retrieve important information from audio texts		0	2	5	1	2	11	22	35	71
Reading: Students understand short texts of familiar topics		0		0	1	2	3	6	45	92
Reading: Students understand the important information in elemental text		0		0	2	4	5	10	42	86
Reading: Students retrieve specific information from non-fictional text		0	2	5	4	8	5	10	38	78
Speaking: Students interpret facts and ideas from scientifically popular text		0	5	12	6	12	34	69	4	8
Speaking: Students compose text on a story, on a verbal basis		0	1	2	3	6	15	31	30	61
Writing: Students write short sentences for greeting, wishes, thanks, preference		0		0		0	3	6	46	94
Writing: Students make a detailed re-writing of short text		0	3	7	7	14	33	67	6	12
Students define the direct and transitive meaning of the word		0	4	9	5	10	22	45	18	37
Students use the meaning and meaning of the word		0	6	14	13	27	23	47	7	14
Students choose words according to a specific language context and a communicative situation		0	4	9	4	8	19	39	22	45
Students use facts and ideas from nonhud. the written answer to a question asked		0	5	12	5	10	22	45	17	35
The pupils write a written text on a story and on a support (a proposed literary hero)		0	2	5	12	24	26	53	9	18

Figure 4. Data of a survey among teachers in 4-th grade

The fourth-graders are more able to perceive the content of the reading, to interpret ideas, to understand the abstraction in the meaning of words and expressions, to apply adequately the vocabulary that is already enriched. This is achieved not only through the school education, but also by the accumulated social and personal experience, the overcoming of deficits in personal development, the established role of the child as a pupil and others.

The conviction of a higher percentage of fourth-grader teachers that their pupils' communication skills are well developed is the result of their observations on a lengthy process. They are, in a sense, indicative of the specificities of shaping these competences throughout the initial stage.

The trend observed in the previous classes continues in the last year of the initial stage of education. The results for the fourth grade are significantly better, the satisfaction of the teachers is greater, but the weaknesses in the communication skills are the same.

Work to build lasting knowledge and skills in this area can be optimized by stimulating self-reading, with pupils being directed to readings of scientific content containing textual and graphic elements represented by the classic book form or a variety of devices.

Teachers use a variety of didactic technologies, specific tools, class and extracurricular forms to motivate students to read independently artistic and scientific literature and folklore works, such as: role plays and performances; festivals and competitions; exchange of books; gaming methods; meetings and discussions with authors; thematic, genre and artist exhibitions.

Primary teachers try to make the ability to read and understand texts attractive, direct and spontaneous. However, only few of them are willing to develop or put in practice methods of promoting reading different from those which are already established. We can assume that it is also necessary to offer new technologies for the formation of reading skills: usage of resources as Internet libraries; open lessons between classes or different age groups; working with parents.

The work to raise pupils' reading culture and autonomy in the initial stage of primary education influences the development of communicative competencies directly. The independent reader would enhance his / her skills and competences by doing reading, repeatedly and with pleasure as part of the ongoing process of education and self-education.
