MENTAL HEALTH PROBLEMS IN THE YOUNG ADULT LITERATURE

***Abstract.** The article analyzes the various mental health issues that are addressed in the Young Adult literature. This article describes books that talk about these issues.*

Key words: literature, Young Adult, problems, mental health.

Unfortunately, mental illnesses are very common among young people. A huge part of the Young Adult literature is dedicated to this topic. This fact is one of the reasons why Young Adult books are popular. Readers can find themselves in the books' characters because they have experienced or are experiencing mental illness in their lives or have seen similar problems in a loved one's life [3].

The mental health problems which can often be detected among young people are stress, depression, self-harm, eating disorders, being bullied, anxiety, OCD (obsessive compulsive disorder), bipolar disorder, etc [4].

Mental Health Problems In The Young Adult Literature

Mental disorders or illnesses are conditions that affect your thinking, feeling, mood, and behavior. They may be occasional or chronic. They can affect your ability to relate to others and function each day [4].

I would like to describe different types of mental health disorders and present books which contain them in their stories.

1. Anxiety. Anxiety is a feeling of fear, dread, and uneasiness. Anxiety disorders are conditions in which you have anxiety that does not go away and can get worse over time. The symptoms can interfere with daily activities such as job performance, schoolwork, and relationships. Also, anxiety disorders include panic disorder which manifest in having panic attacks [5]. Laurie Halse Anderson in her "Speak" book tells

the story of high school freshman girl who experiences anxiety which leads her to the point when does not want to speak at all [1].

2. Depression. It is a serious medical illness when a person experiences such symptoms as feeling very sad; loss of interest in favorite activities; not being able to sleep, or sleeping too much; feeling hopeless, irritable, anxious, or guilty; feeling very tired; aches or pains, headaches, cramps, or digestive problems; thoughts of death or suicide. In the “Our Chemical Hearts” by Krystal Sutherland novel the main female character has gained depression after an accident [8].

3. Bipolar disorder. People who have it go through unusual mood changes. They go from very happy, "up," and active to very sad and hopeless, "down," and inactive, and then back again. They often have normal moods in between. The up feeling is called mania. The down feeling is depression [5]. Jennifer Niven in her “All the Bright Places” novel writes about a boy who suffers from an undiagnosed bipolar disorder and therefore, deals with very high highs and very low lows [6].

4. Eating disorders. They involve severe problems with your thoughts about food and your eating behaviors. You may eat much less or much more than you need [5]. In the Jennifer Niven’s “Holding Up the Universe” book the main female character who has eating disorder. Because of her larger than normal body size she experiences bullying [7].

5. Obsessive–compulsive disorder (OCD). It is a mental disorder in which a person has certain thoughts repeatedly (called "obsessions") or feels the need to perform certain routines repeatedly (called "compulsions") to an extent which generates distress or impairs general functioning [5]. In the “Perfect Escape” by Jennifer Brown a protagonist’s older brother has OCD. Reading this book we can truly see what how this mental disorder affects one’s life [2].

6. Schizophrenia. It is a serious brain illness. People who have it may hear voices that aren't there. They may think other people are trying to hurt them. Sometimes they don't make sense when they talk. The disorder makes it hard for them to keep a job or

take care of themselves [5]. In the book “Words on Bathroom Walls” by Julia Walton we read an account of 10 months in the life of a high school boy who has schizophrenia [9].

Conclusion

Nowadays, Young Adult literature is flourishing and mental health disorders are one of the topics that gets to be intensively discussed. Young Adult books are not only about illnesses but about people. About their lives, about their friends and families, about how protagonists face their fears, plan their future, struggle to make the right decision in various situations, just like those people who do not have mental health issues, but they do all of that suffering from their mental illness. Stories of such people teach a lot and a reader will gain a lot of useful information. Unfortunately, it so happened that people struggling with mental health problems are often called “crazy”, “mental”. Mental illnesses are regularly stigmatized in the society. That is why young people are afraid to admit or announce that they have mental health issues [3]. Young Adult books show that it is absolutely ok to have problems, that young people should not be afraid to speak aloud about their issues and that there are plenty of ways to cure some of the problems or maintain a normal lifestyle while having mental health issues. These books illustrate that there are a lot of people who have different kinds of mental health problems among us and they are not necessarily truly mentally crazy ones, they just need some medical help, it is not their fault they were born with this or that type of mental illnesses.
